Discover the latest features and tools in Java 9Learn to combine a few smaller programs to create a larger program to create basic Java objects and reuse code, accurately handle exceptions and events!If you're ready to go to Java, this bestselling guide will help keep your head above water! If you have a 6th edition, please visit Java ForDummies, 6th edition. For earlier editions, or for any other Barry Bird book, visit my homepage. Download the code book for use with Eclipse or from NetBeans Download the book code for use with IntelliJ IDEA See solutions for the book Try It Out Exercises! Important updates: If you're using Eclipse and creating your own project, you may be asked to make a module name. The safest thing to do is to press the Don't Create button. If you make a name and click the Create button, Eclipse may refuse to run the code. (The modules may not contain files that are not in the named packages. Anyway, if your project contains a file called module-info.java, delete that file. The best place to get Java JDK. I suggest downloading Java 11, but almost any version of Java should work. Talk to me: Chapter Notes: Barry Bird If you have a 5th edition, visit allmycode.com/JavaForDummies. This website is under development. Any content is missing, please send an email to JavaForDummies at BurdBrain dot com. Download a mail file containing code lists from Java For Dummies, 4th edition. Download the PDF document to decrypt Javadoc pages (Java API API Download the pdf document about setting up your computer to use a command window (instead of JCreator or some other integrated development environment) in Windows, Unix, Linux, or Mac. Download the java launch pdf document using the team window in Windows, Unix, Linux or Mac. Download the PDF document about repairing the JCreator configuration after you've finished installing JCreator. View pre-date videos (in the course of November 2009, anyway) on the use of Eclipse. Download an old PDF document about using Eclipse (instead of JCreator or some other integrated development environment) in Windows, Unix, Linux, or Mac. Download the PDF document about using NetBeans (instead of JCreator or some other integrated development environment) in Windows, Unix, Linux, or Mac. Download the PDF document about creating an input file in Unix, Linux, or Mac. Download the pdf document about the use of command line arguments in JCreator. Download the PDF document on an alternative way to break out of the loop (as I mentioned in Chapter 6). Download the pdf document explaining the two-dimensional arrays. Download the pdf document explaining the short-circuit assessment (some subtle points about Java's Galilee Operators, download a sample of code for use with a two-dimensional array document. Here's a screenshot of a page from Oracle's java site (.
